Performance Evaluation of Florida’s Transit Systems

Instructions

The following screen is the main menu: there, click on a book title and use the Bookmark Navigation Pane on the left to navigate the book.

Each document on this CD-ROM includes a number of data tables. It should be noted that the data in many of these tables are presented in two colors: blue & black. The blue numbers represent directly-entered values for each system’s statistics, while the black numbers represent the results of equations that manipulate the entered data.

You can download any of these data tables to Excel by double clicking on the table. When you do so, you’ll be asked to allow Excel to launch: click the “All” button.

It should be noted that the tables presented in each of the trend documents included on this CD-ROM display data from FY 1993 to FY 1998. However, when opened in Excel, the corresponding spreadsheets include data going back to the 1984 fiscal year.
